Morris Metal Flexible Hose

☐ General Purpose Metal Flex Hose

This unlined general purpose hose features interlocked construction formed from a single metal strip. The balanced interlocking manufacturing process provides for maximum flexibility and longest service life. Pressure and vacuum capabilities may be easily enhanced by the selection of an appropriate packing material.

The unlined metal flex-hose is available in various alloys, metal strip thicknesses and in diameters from 1-1/2" through 8" I.D. Interlocked hose is available in any length and can be provided in bulk or fabricated assemblies.

Metal Smooth-Bore Flex Hose

This smooth-bore hose is ideally suited for dry-bulk pneumatic conveying. This hose is produced with a durable outer armor and a highly abrasion-resistant liner. A precision manufacturing process makes this hose unequaled in strength and flexibility. Pressure and vacuum capabilities may be easily enhanced by the selection of an appropriate packing material.

The smooth-bore hose is available in various alloys, metal strip thicknesses, and in diameters from 1-1/2" through 8" I.D. Smooth bore hose is available in any length and can be provided in bulk or fabricated assemblies.

Morris Custom-Fabricated Interlocked Hose Assemblies

State-of-the-art fabricating methods, combined with an extensive selection of Morris Ever-Tite® couplings, enable Morris to effectively supply any configuration of hose assemblies.

Typical end fittings include cam and groove connectors, pipe and tube nipples, flanges and hose shank adapters.

Maximum Steel and Fabrication Temperatures

| Steel Type | Maximum Temperature | Fabrication Technique | Maximum Temperature | |
|------------------|------------------------|--------------------------|------------------------|--|
| Stainless Steel | 1,750°F | Welding | 1,200°F | |
| Carbon Steel | 850°F | Brazing | 700°F | |
| Galvanized Steel | 450°F | Ероху | 250°F | |

Note: Epoxy may be used with all metal types. However, applications are limited to 250°F service.
